

Bulk Data Extractions – Convert MEDITECH data

If you need your MEDITECH data moved to a relational database, flat files, or any other format, we have the solution for you. Whether you need to convert multiple databases in their entirety or move just a selected subset of data, our Bulk Data Extractions service can accomplish the task quickly and efficiently.

MEDITECH has one of the most sophisticated hierarchical databases ever developed. Due to the highly integrated and complex nature of the data structures it has not been easy to export a large volume of data efficiently until now. Our Bulk Data Extractions solution can package and deliver your MEDITECH data and convert it to the desired format. This will enable your enterprise to get the most out of your data.

- Data conversions
- Reportable purged/archived data
- Decommission legacy systems
- Efficient and affordable
- One time or scheduled ongoing exports
- Move multiple applications
- Auto generate target tables
- Minimal system resource impact
- Supports both C/S and MAGIC

Your enterprise can utilize extracted data for reporting, for use in other vendor systems, and for long term storage. You can save live data in a reportable format before it purges. Converting your MEDITECH MAGIC or Client/Server data to another vendor system has never been so easy. You can utilize our Bulk Data Extractions service for a single use or you have the option of scheduled ongoing exports. The data exports quickly and causes no downtime.

Blue Elm's extensive and in-depth knowledge of the MEDITECH data structures and systems enables us to provide an efficient and affordable solution to enable you to expand your use of your MEDITECH data without compromising the integrity of your data and without impacting your users.

Blue Elm Company specializes in open connectivity, data repository auditing, custom applications, interfaces, and products and services for report writing and management.
